Constellations

Constellations are groups of stars that create pictures in the night sky. As the earth rotates everyday, and revolves around the sun every year the constellations that can be seen change. There are some stars that you can only see in the summer, and others you can only see in the winter. Some star groups are very well known like the Big Dipper which is part of the Ursa Major constellation. Others are less well known like Orion, the Great Hunter.

Ursa Major
